João Pedro De Souza

Software Engineering Student | Back-End | Java | Spring | Python | .NET | SQL | AWS | Docker
jujp.souza@gmail.com | São Paulo, Brazil | (11) 99701-9499 | Linkedin | Github

PROFESSIONAL SUMMARY

Software Engineering student at FIAP (currently at the 2nd semester), passionate about technology and development, seeking an internship opportunity. Hands-on foundation in Java, C#, OOP, Spring Framework, and .NET; building and consuming REST APIs; data modeling and relational databases (SQL, MySQL, PostgreSQL, SQLite); Python; and familiarity with AWS and generative AI. Experience being built through academic and personal projects involving business rules and systems integration. Fluent in English (C2) and available for on-site work in São Paulo and the surrounding area.

EDUCATION

Software Engineering, FIAP
Feb 2026 – Present

- In progress — 2nd semester
- Expected completion: December 2029

TECHNICAL PROJECTS

Spring Bank | *Java, Spring Boot, MySQL, REST API, AWS, Docker*

MVP (in development) of a banking dashboard with accounts built on Spring and Java, covering deposits, withdrawals, and transfers, with a focus on business rules, validations, API contracts, and data persistence. A project where I practice key back-end development concepts and Spring fundamentals.

OrbitMax Sentinel | *Python, REST API, JavaScript, ESP32 (C++)*

Back-end that receives, processes, and serves real-time sensor data sent by an ESP32, consumed by a wildfire-monitoring landing page to support decision-making. Academic project aimed at solving a real-world problem using technologies covered during the degree.

FIWARE | *Python, ESP32 (C++), AWS, Docker*

MVP in development of an open-source platform for managing real-time context information, making it easier to build smart solutions. Academic project aimed at practicing full-stack systems integration, API consumption, and early Docker and AWS practices.

Jobtrack API | *Java, Spring Boot, PostgreSQL, Docker*

API for tracking job applications, developed alongside online courses to practice new web and Spring concepts, security, API contracts, business rules, and systems integration.

CHALLENGES AND EXPERIENCES

FIAP x Jovi

Competitive campaign to develop an innovative project for the new device from the brand Jovi Mobile.

SKILLS

Languages: Java, Python, SQL, JavaScript, C# (Basic)
